Project Management Plan

As an information professional, there will be time when I will be involved with overseeing the development and implementation of a database. The current situation is a software tracking database for a university. It will track all the software used through the institution and will be used as well be maintained by the Information Technology (IT) department of the university. By using the six phases of project management by Wouter Baars, I will be writing the plan to implement this database.

Initiation Phase

Definition Phase

Design Phase

Implementation Phase

Follow-Up Phase
